

mmWave Application Engineer (m/f/d)

Rogers Corporation • Eschenbach in der Oberpfalz, Bayern, Deutschland (Remote)

As an mmWave Application Engineer (m/f/d) you will work closely with customers and supply chain partners and make a significant contribution to the definition and design of new products in order to successfully advance new antenna technology platforms.

Essential Functions

- Organization of customer meetings in order to understand the technical requirements for radar sensor / antenna solutions in the automotive sector. Definition of product specifications and development of solutions in cooperation with the R&D team that meet or even exceed customer specifications.
- Technical support for customers in all phases of the product development and qualification process to enable successful integration of our products.
- Definition and support in the development of reference designs and generation of application notes.
- Working with R&D and Business Strategy Group to identify new growth platform opportunities.

Your Profile

- University degree (master / diploma) in electrical engineering with a focus on electromagnetics, high frequency / physics
- Good knowledge of RF / mm Wave Antennas, MMICs & Radar
- 7-10 years of professional experience in the field of RF application technology
- Experience with simulation software (Ansys HFSS / CST Microwave Studio).
- Experience in the design of (RF) circuits with special PCB materials
- Business fluent knowledge of English as well as excellent communication skills on technical topics
- Fluent knowledge of German language is beneficial
- Very good presentation skills
- Experience in project management (organizing and planning, follow-up and implementation)
- Experience in dealing with customers
- Remote work experience
